8. In any room in which steam is used for the purpose of artificial humidification, its introduction shall occur when the dry bulb temperature of the room exceeds 55° Fahrenheit.

9. Small rooms in which artificial humidification is used, hygrometers on the walls and down below shall be provided and maintained:—

(a) *Wet-dry department*.—Two hygrometers for each room with less than 500 cubic feet, and one additional hygrometer for every 500 or part of 500 pints in excess of 500.

(b) *Other departments*.—One hygrometer for each room of less than 500,000 cubic feet capacity, and one extra hygrometer for each 500,000 cubic feet, or part thereof, in rooms of this size.

(c) One hygrometer shall be provided and maintained for taking shade temperatures. This shall be fixed in a position approved by the Inspector.

10. If it is proved to the satisfaction of the Chief Inspector of Factories that in every room in a department, not being a wetting department of a cotton mill, the limits of humidity allowed in the schedule are not ordinarily exceeded, the Chief Inspector of Factories may, by an order in writing, exempt that department from the provisions of rules 4 and 7. The manager of the factory shall have a copy of each order entered in the Inspection book maintained under rule 1 of the *Factories (Amendment) Rules, 1923*.

11. A copy of the schedule appended to these rules shall be affixed near each hygrometer and maintained in a legible state.

12. (1) The correct wet and dry bulb readings shall be recorded at each hygrometer by competent persons appointed by the manager of the factory and approved by the Inspector at the following times on every working day:—

(a) Once between 7 and 9 a.m.

(b) Once between 11 and 2 p.m.

(c) Once between 4 and 5-30 p.m.

(2) These temperatures shall be recorded at the time of reading in a pocket note-book in Form F appended to these rules and entered in a special Humidity Register in Form H appended hereto. The pocket note-book and the register shall be maintained in a clean and legible state. At the end of each week the person making the readings shall sign the register and certify that the readings are accurate and that each hygrometer has been maintained in accordance with the rules. The register and the pocket note-book shall at all times be available for inspection by the Inspector and copies of the entries made therein shall be sent to him whenever he so requires.

(3) The entries made in the register shall be considered as *prima facie* evidence of the temperature and humidity of any department but an Inspector may at any time check the correctness of the readings by personal observations.

(4) Every hygrometer maintained in a cotton mill where steam shall be given a serial number in the Humidity Register and such numbers shall be marked on the respective hygrometers and referred to in the pocket note-book.

(5) Forms F and H shall be used for recording the temperatures. Copies of the forms can be had on request from the Superintendent, Government Press, Madras.

13. Every hygrometer shall be constructed and maintained in the manner specified below:—

(a) It shall comprise two aneroid or alcohol thermometers, similar in construction and equal in dimensions, stems, and divisions of scale. Each hygrometer shall be mounted in a wooden or metal frame and have a suitable receptacle containing water.

(b) The wet bulb shall be slowly covered with a single layer of fine muslin, kept wet by means of a cotton or woolen wick attached to it and dipping into the water of a reservoir. The muslin covering the wet bulb and the wick shall be suitable for the purpose and strong. Previous to use, all size and gauge shall be effectively removed by boiling the muslin in water.

(c) The length of the wick between the wet bulb and the point where it dips into the water reservoir shall not exceed three inches. The muslin shall be attached to the wet bulb by means of a strip laced on the wick which shall not be so tight as to hinder the free flow from the reservoir.

14. Each thermometer shall have the following characteristics:—

(a) The bulb shall be spherical, and of suitable dimensions;

(b) The base of the stem shall be such that the top of the mercury or alcohol column may be clearly defined, and correct readings made at a distance of 3 feet;

(c) Each thermometer shall be graduated so that accurate readings may be made up to 120 degrees Fahrenheit;

(d) Every degree from 30 degrees Fahrenheit up to 120 degrees shall be clearly marked on the glass stem of the thermometer itself, each fifth and tenth degree shall be marked by longer marks than intermediate degrees, and the numbers marked opposite each fifth degree, i.e., 50, 60, 70, 80, 90, 100, 110 and 120;

(e) The working shall be accurate to within .2 degree at all readings between 50 and 120 degrees;

(f) The accuracy of each shall be certified by the National Physical Laboratory, London, or the Meteorologist, Madras, and each certificate shall be kept attached to the Humidity Register.

If an Inspector gives notice in writing that a thermometer is inaccurate, it shall be replaced by another of certified accuracy within two months; unless after examination by the certifying authority used above a fresh certificate of accuracy has been obtained within that time, in which case the new certificate shall be attached to the Humidity Register.

15. Every hygrometer shall be so mounted that

(a) the exposure of the dry bulb temperature shall not be affected by the proximity of water in the reservoir; and

(b) the bulb of each thermometer shall be freely exposed on all sides to the air of the room.

16. Every hygrometer shall be maintained at all times during its period of employment in efficient working order so as to give accurate readings and

(a) the muslin covering and wick of the wet bulb shall be renewed once a week;

(b) the water in the reservoir shall be removed as frequently as is necessary to keep the receptacle at least half full of water;

(c) the water used shall be distilled, boiled or pure rain water.

76. No readings of the Hygrometer shall be taken within fifteen minutes of the removal of the water in the reservoir.

76. No Hygrometer shall be affixed to a wall, pillar or other surface unless suitably protected from it by a non-conducting material.

77. No Hygrometer shall be suspended at a height of more than 6 feet from the floor of a room or in the direct draught from a fire, window or ventilating opening.

78. (a) The positions of hygrometers shall be such as to give an accurate indication of the temperature of the room in which they are hung. The positions and construction of the hygrometers shall be approved by the Inspector subject to confirmation by the Chief Inspector of Factories.

(b) The outside hygrometer provided for taking shade temperatures under rule 5 (a) shall be placed in such a position as to be protected at all times from the direct rays of the sun and from rain, and capable at all times of giving true shade temperature.
